Premium e-bikes

GUIDE BOOK

**MEET
BESV**
HYBRID MODELS

Our gravel bikes are built for pretty much everything. Whether this is a paved road ride or an epic bike packing adventure, that can do it all. If you can plan it, this bike can ride it.

JGR:

Based on the same platform, the JTR will get you through your town or city with great agility and ease. Fitted with everything you need to survive in the urban jungle: fenders, lights, kickstand and a rear carrier. Because of its low weight, it's easy to handle on both the road or in case you need to take it with you in the elevator.

JTR:

**LIGHTWEIGHT, AGILE, PLAYFUL
AND ADVENTUROUS !**

With our J-series we are introducing a brand new family in our BESV line-up. As we have seen the gravel segment grow quite big in recent years we have also seen the interest for e-gravel bikes grow more and more. As we are already looking for a lightweight commuter type of e-bike, we found these two could be combined in the same platform which we are now introducing as the J-series.

J SERIES:

Bike is equipped with hangers for racks and fenders

Rear hub motor
40Nm torque

Charging port

Control unit

Battery doors

Multifunctional HMI Panel

Battery 360Wh

Carbon fiber fork

CHARGING PORT:

Whether you're embarking on a longer bike-packing trip or enjoying a charging-free commute in the city, our 20 AMP charging port offers rapid charging speed and is designed to be compatible with our future products, such as the battery extender. With this feature, you can confidently ride without worrying about any pit stops along the way!

A close-up, black and white photograph of a bicycle's rear hub assembly. The image shows the rear wheel's spokes, a silver disc brake rotor with a multi-spoke design, a black cassette with several gears, and a portion of the rear frame and chain. A grey rectangular text box is overlaid on the right side of the image, with a small orange triangle pointing towards the hub area.

MOTOR:

Small, silent and powerful. This motor provides plenty of power and torque (250W rated power, 40Nm of torque) to get you where you want to go.

BATTERY DOORS:

Easy to access, easy to service, this will shorten your visits to our service points to the minimum!

HMI PANEL:

It's all right at your fingertips! Multifunctional panel integrated with the frame allows the rider to set up riding mode and adjust the lights.

Button:	Functions:	Operation:
Power button:	<ol style="list-style-type: none">1. Turning On for system2. Turning Off for system3. Switching power mode	<p>Press and hold the power button for two seconds</p> <p>Press and hold the power button for two seconds</p> <p>Short press on the power button for half second</p>
Light switch:	<ol style="list-style-type: none">1. Turning On for F/R light2. Turning off for F/R light	<p>Press and hold the light switch for two seconds</p> <p>Press and hold the light switch for two seconds</p>
Other functions:	<ol style="list-style-type: none">1. Fault display2. Charging	<p>Red and blue lights flash alternatly</p> <p>The battery indicator shows the battery level from bottom to top. White color LEDs.</p>
