  - TruFit Adjustability
  - Virtual Shifting
  - Auto Calibration & Updates
  - Wahoo Ecosystem Compatibility
  - Wahoo X - Train Without Limits

# NEW FEATURES

FOR KICKR + KICKR BIKE

## WIFI

WIFI provides significant increases in data transfer speed and stability vs Bluetooth and ANT+. This helps solve most drop-out issues and delivers your on-screen stats over 65% faster than before.

Automatic firmware updates keep you ready to ride with the latest release. Thanks to the super stable WIFI protocol, Windows and Android connectivity issues are also resolved.

## ERG EASY RAMP

ERG Easy Ramp smooths the transition back to large wattage intervals from a stop allowing you to pick your cadence back up.

## ODOMETER

A built-in odometer identifies the exact amount of use, helping you keep track of progress by knowing how many miles you've achieved on your trainer.

# THE MOST CONNECTED ECOSYSTEM

## KICKR DESK & MAT

No indoor ecosystem is complete without the KICKR Indoor Cycling Desk and Mat. The desk has built-in tablet and smartphone stands and built-in holes to connect all your computer technology, while the Mat adds cushioning and floor protection.

## KICKR CLIMB

For those looking to add real-time gradient changes to their KICKR set-up we offer KICKR CLIMB, allowing you to elevate your indoor experience on Wahoo RGT routes, workouts on Wahoo SYSTM or rides captured by your ELEMNT Bike Computer.

## KICKR HEADWIND

Paired directly to your smart trainer, heart rate monitor or speed sensor, HEADWIND automatically adjusts to match workout intensity, providing targeted cooling that keeps you comfortable during tough workouts.
